Aveniros Announces the Availability of Tutti Connect 1.0

October 7, 2020

Aveniros LLC, a market leader in educational technology and developers of the Tutti platform for education, is pleased to announce the availability of Tutti Connect 1.0, a new suite of interoperability tools designed to help publishers easily integrate their Tutti applications with common third party Learning Management Systems and data services.

Version 1.0 of Tutti Connect provides support for course content created with the Tutti authoring tools to be exported as a Thin Common Cartridge and imported directly into the Canvas LMS. Publishers can distribute the cartridges to districts, schools and teachers using Canvas where teachers can add that content to their courses, make assignments to their classes and students can interact directly with that content all from within Canvas.

Tutti Connect 1.0 also fully supports grade passback to Canvas as well, so that assessment scores generated by students will be sent back to the student assignments as well as the Canvas grade book. This includes assessment scores for Learnosity activities for our clients that deliver those assessments through Tutti.

Aveniros' COO Mark Theall says "We're always striving to extend the features and functionality in our Tutti platform to provide our publishing partners new ways to leverage their content. Our ability to seamlessly integrate both content and scoring data with the Canvas LMS through Tutti Connect 1.0 certainly supports that goal."
